The grey arc in the template shows the underlay and stitching of the rod tunnel - we do not recommend placing smaller graphics, texts or logos in this space, as they could be slightly deformed by stitching.

Please send the graphic materials including texts and logos in vector format (curves). If specific coloring is required, the given color must be approved according to our internal sublimation printing color chart or the requested shade must be specified according to the Pantone swatch.

Raster motifs must be delivered in sufficient quality, sharpness and color, min. resolution of the materials 300 dpi in a ratio of 1:10, for smaller flags 1:1.

In case of any questions or uncertainties, do not hesitate to contact us.
